

# Saving Water!

By 4A Alison Chan

Water is important to all animals and plants. We cannot survive without water on Earth. It is also a precious gift from God to Earth. Moreover, very low percentage of clean water is available on Earth, so we need to realise its importance. It is time for us to take action and start saving water.

First of all, we need to use less water to save the Earth. We can take a shorter shower instead of a bath. We can also use a broom to mop the floor and use a bucket of water to clean the car instead of using a hose. On one hand, we should turn off the tap when we are brushing our teeth. On the other hand, we shouldn't let the tap run while washing vegetables. Unnecessary flushing should be avoided. Wash the clothes in a washing machine only when there is a full load. With these measures, we can definitely save a lot of water.

Furthermore, we can recycle water too. We can use the water that has been used to wash rice or vegetables to water the plants, so as the drinking water that has been setting out for too long. Use the water from the dehumidifier to mop the floor. Also, we can store the soapy water after a shower or a bath and use it to clean cars and mop the floor too.

Regular check-ups can also help to save more water. For example, check faucets and pipes regularly to avoid any leakage and use water meter to check hidden leakage. We should check our washing machine every month. Use a machine that has the function of saving water. It helps us to save more water.

All in all, life is not possible on Earth without water. We need water to grow, develop and live in all walks of life. It is the basic requirement of our body. Will you save the Earth? Let's save the Earth together!
